## ChibiTracker License Keygen

=====  
ChibiTracker is a portable, easy to use IT (Impulse Tracker) clone. It can read and render all IT files, and it's even capable of creating ITS from extracted instrument samples, using the included program (it is fully Open Source, and comes with full source code, under the GNU Public License). Now let's go through some of the features that distinguish ChibiTracker from other IT clones: ChibiTracker aims to:

=====  
\* be a simple and easy-to-use tracker that you can enjoy playing for hours. \* be a 100%-IT clone and open-source software, so we can all benefit from our contributions, if you have the will. \* use as much of the power as possible, but respect its memory-usage, because I'm not rich (yet). \* be both a tracker with abilities, and an editor with abilities. \* aim to the highest standards of portability, and do not depend on hardware extensions (a very good reason to use PortableApps). \* be very easy to install, for those of you who don't know how to install Open Source Software. \* do not depend on iTunes, and you can use it anywhere. ChibiTracker User Interface:

=====  
ChibiTracker is based on a dedicated user interface, so we should mention it: ChibiTracker features a dark background theme, with a native version for Mac OS and Windows, and a custom desktop theme for Linux and FreeBSD. It has a transparent black menu bar, with lots of icons, and it is fully screen-clearing, so it can be used anywhere.

ChibiTracker is not a completely "black box", because it is based

on libcwi, a C-based cross-platform music library. Therefore, some customization on the internal library is needed. In fact, ChibiTracker has been designed to be customizable from the very beginning. If you are looking for deep functionality and a deep customization, you should have a look at the documentation, because ChibiTracker has lots of customization options, for every single part of the interface. You can change the theme, the colors, the icons, everything. And remember: if you don't like the existing icons, you can replace them by yours. You can resize the whole interface, including the playfield, the tracklist, the play/edit/display items, the transition, the buttons
