Logbook Pro [32|64bit] [Latest]

Software Review: You may use any aircraft that you may legally fly and any type of fixed wing or rotorcraft that you may legally operate. If you use an aircraft that does not have its own flight log, Logbook Pro will use the flight log that your pilot's license contains. This program is not an official part of any organization, it is only an unofficial software by an independent developer. This program does not update its own flight log and does not validate the user's flight log. For these reasons, the program recommends that the user validate the flight log with the appropriate official agency. Who is the Program For: This software is designed for pilots of light aircraft, including fixed-wing and rotorcraft. It is designed to help you record and organize your airplane flight log, both manually and automatically. If you fly a different aircraft, such as helicopters, gliders, sailplanes, balloons, hang gliders, or even paragliders, this program will still work for you as well. How to create a new logbook: It is first necessary to save the logbook file by specifying an output directory and a name for the file. You can also enter contact information for the aircraft, etc. The aircraft data is then automatically filled in as required by the application. Information can then be added about the aircraft, from which certificates can be edited and from which you can upload a photo. The aircraft data can be linked to the certificate via a third-party service, but you may also add your own data manually. The certificate is displayed in a light gray color that can be modified. Report data can be added to the aircraft. Reports can be generated from a date, from a report range, or from the certificate itself. For example, a monthly report can be created that displays the data from a specific certificate. If you use a flight review service to check your flight logs, it is possible to sync the data between Logbook Pro and the review service. This allows you to change your data in Logbook Pro and have the same changes reflected in the review service. How to Use: Creating a new logbook: It is first necessary to save the logbook file by specifying an output directory and a name for the file. You can also enter contact information for the aircraft, etc.

Logbook Pro Logo A clean and uncluttered interface is the first thing you see upon starting Logbook Pro. Its three panels on the left side of the screen, each representing a different type of information (Charts, Documents, and Settings), are a welcome sight after being stuck in the typical aviation app. The right side of the screen is neatly organized into three groups. The first group includes useful information such as available charts and currencies. The second displays documents, and the third is for settings and preferences. The top of the main window is well-organized into tabs, which makes navigation easy. There are five tabs for quick access to essential functions, but the first group takes up the most space because it's home to the functions that
